## TRUBLUE AUTO BELAY

**We designed and engineered the TRUBLUE to be the most advanced, flexible, and dependable auto belay available**

Auto belays benefit all levels of climbers, from the novice getting a feel for the movement to the elite climber focusing on conditioning and training – and they're proven to increase membership and participation for all types of facilities while lowering costs.

The TRUBLUE Auto Belay is the only auto belay designed specifically for climbers, and it's perfect for climbing gyms, ropes courses, zip line tours, and more. With the TRUBLUE it's possible to descend from platforms, introduce participants to free fall rides, teach your clients to rappel—your imagination is the limit.

### ADVANCED TECHNOLOGY

The TRUBLUE uses a self-regulating, magnetic braking system that accommodates the widest range of user weights of all auto belay systems. This makes it ideal for use by both children and adults in all types of situations.

- **Braking resistance** adjusts automatically to the weight of the climber, always providing a smooth descent
- **No wearing** or sacrificial wear parts – which means low maintenance and low cost of ownership
- **Engineered to eliminate the need for a clutch bearing**, removing a possible point of failure found in other auto belay designs
- A webbing feed system that maximizes the life of the webbing

*Using a TRUBLUE Auto Belay in your activities increases participation and fun while driving down costs and risk.*

## ZIPSTOP ZIP LINE BRAKE SYSTEMS

**The zipSTOP slows your zip line riders gradually, comfortably, and reliably using self-regulated magnetic braking technology**

The zipSTOP is easy to operate, automatically resets, has no downtime due to weather, and provides consistently smooth braking for a wide range of rider weights, with arrival speeds up to 15mph (24kph) with a 2:1 reduction ratio. The result is higher throughput and a better customer experience.

The zipSTOP IR is a more streamlined version that can accommodate speeds up to 37 mph (60 kph) without the need for an external reduction line system, making installation and upkeep easier.

### KEY BENEFITS OF ZIPSTOP BRAKE SYSTEMS

- **Eddy current braking technology** allows for smooth rider deceleration
- **Wide range** of rider weights and speeds gives you flexibility in zip line design and operations
- **Increased throughput** through consistent braking distance and automatic reset
- **Low operational cost** and risk by eliminating the need for rider or staff involvement in braking
- **Low cost of ownership** from low maintenance costs and minimal parts replacement
- **All weather performance** because it can be installed in any outdoor environment and was built to withstand the elements

*zipSTOP zip line brakes are simply the best choice for your zip line or canopy tour.*

## QUICKJUMP FREE FALL DEVICE

**QUICKjump gives a rider the feeling of a true free fall experience, while comfortably controlling their descent**

The QUICKjump family of free fall devices provide an exciting element with high throughput and low operational costs to operators of amusement parks, family entertainment centers, adventure parks, shopping centers, resorts, ropes courses and more.

QUICKjump is modular and compact, allowing it to be installed in almost any high location, even indoors. Affordable enough for even the smallest facility, the QUICKjump can pay for itself in a matter of a few hours of operation.

### KEY BENEFITS

- **True free fall feeling** with our magnetic braking technology adapted to allow an initial rapid descent, giving the rider a stomach-flipping thrill
- **Simple to install** and relocate with a compact, modular unit designed to be hung from a top anchor and moved easily
- **High throughput** with a line that retracts quickly and smoothly, allowing for rapid turnover and providing a high return on investment
- **High reliability** with no sacrificial wear parts
- **Minimal maintenance** and low cost of ownership

*The QUICKjump Free Fall Device was designed to provide an exciting free fall experience with high throughput and low operational costs.*

## ARBOREAL TREE CLIMBING SYSTEM

**All you need is a tree, pole, or existing column to create an exciting challenge for climbers of all ages and abilities**

The Arboreal Tree Climbing System is the perfect way to create a thrilling or skills-building adventure. Choose from a wide variety of handholds in varying types and colors to accommodate climbers of all ages and abilities.

The modular design makes it easy to change the location, placement, routes, or handhold difficulty, which lets you continually update routes and keep climbers coming back for more.

Designed to withstand harsh outdoor environments, it can work as a standalone adventure in a backyard or as part of an existing resort, ropes course, camp challenge, or adventure park element. It's sturdy enough to support your climbers and their gear, while also being gentle on trees.

### COMPONENTS

Each Arboreal Tree Climbing kit comes with everything you need to reach the treetops, including:

- Straps that securely fasten around a tree, pole or column
- Base plates for handholds that can fit anywhere on the strap
- Sets of handholds (over 300 types to choose from)

*Climb up, jump down, or zip away with the Arboreal Tree Climbing System – the only limiting factor is your imagination.*
